

Submit your Jupyter notebook with the answers to gradescope by 1:50pm.

1. Show how to prevent the evaluation of $\sqrt{4\pi^2}$.

Given the expression of $\sqrt{4\pi^2}$, show its evaluation.

2. Execute in a SageMath code cell the statement `thePi = pi`.

After this command, `thePi` refers to `pi`.

- (a) What is the command for a new variable `myPi` to refer to `thePi`?
- (b) Give the commands to verify that `myPi` refers to `thePi` and evaluates to `pi`.
